# LHQB-潜水式高效节能搅拌曝气装置

## LHQB Submersible Aerator

### 设备简介/Equipment Introduction

曝气机是氧化曝气池中的核心设备，它将产生的微小气泡扩散到待处理水中以达到搅拌曝气的目的。LHQ-B潜式高效节能搅拌曝气机是我公司为不断适应工业废水、市政污水处理等需要生化处理工艺的行业而研发制造的高新技术产品。

LHQB Submersible Aerator is a essential equipment in aeration basin, it utilize fine or medium bubbles diffuse to provide aeration and mixing to process water. LH-QB submersible aerator is widely used in municipal sewage treatment plant and industrial wastewater treatment plant ,like paper mill wastewater treatment, petroleum &chemical industrial wastewater treatment plant, etc.

### 设备特征/Equipment Features

### 工作原理/Working Principle

鼓风机供给的压力空气通过可移动的空气管道送到转子，在转子的高速作用下被击碎成微小气泡，气泡和周围的水体被强力混合后在转子作用下呈波浪型曲线辐射，定子通道能够保证水气混合液在不同形状结构设计的曝气池中均匀分布，同时转子产生的强大紊流保证了理想的传氧效果，不断推动池内水、气和活性污泥的高效混合，从而达到满意的去污效果。由于运行时因产生负压引发的自吸作用，设备对鼓风机的供气压力要求降低，通常可与水深相等，较之传统设备动力消耗明显降低。

The pressured air supplied by blower goes though air pipe and reach to rotor, high speed rotor hit and break pressured air into tiny bubbles. These tiny bubbles and water around are shaped to wave curve by strongly mixing of rotor. The stator channel can ensure the air-water liquid evenly distributed in different shapes of aerator basin, meantime, strong mixing flow by rotor continuously mix the water, air and activated sludge ,which ensures the ideal aeration efficiency. The negative-pressure while submersible aerator working, lead to self priming , thus it will lower the air pressure ,supplied by blower, normally this pressure just equal to water height. So it is obviously energy-saving than traditional aerator.

# LHDSNS-带式浓缩压榨一体化过滤机/ LHDSNS Belt Filter Press

## 设备简介/Equipment Introduction

LHDSNS-带式浓缩压榨一体化过滤机是一种新型高效浓缩脱水设备。主要用于造纸、化纤、印染、城市污水处理厂的混合污泥、消化污泥及剩余活性污泥的脱水，也适用于各类工业污泥的脱水。

LHDSNS Belt Filter Press is used for solid/liquid separation process, particularly the dewatering of sludge in the chemical industry, paper mill, printing and dyeing mill, mining and water treatment. The process of dewatering is primarily obtained by passing a pair of filtering cloths and belt through a system of rollers, the system takes sludge or slurry as a feed, and separates it into a filtrate and a solid cake.

## 工作原理/Working Principle

污泥首先通过的是由蓝海环境专业设计制造的水中造粒器，它可使污泥与药液发生无动力混合，充分发挥絮凝的作用。之后，污泥进入重力脱水区，在该区域内，含固率大于1%的污泥可以直接进行脱水，脱水后的污泥再进入压榨脱水区，通过了双重脱水的污泥其干度即在18-22%之间。另外，本设备采用的是气控调偏技术，在保证滤带以最佳状态运行之外还延长了滤带的使用寿命。

LHDSNS Belt Filter Press is a Biosolids/sludge dewatering device that applies mechanical pressure to a chemically conditioned slurry, which is sandwiched between two tensioned belts, by passing those belts through a serpentine of decreasing diameter rolls. The machine can actually be divided into three zones: gravity zone, where free draining water is drained by gravity through a porous belt; wedge zone, where the solids are prepared for pressure application; and pressure zone, where medium, then high pressure is applied to the conditioned solids. Typically, a belt filter press receives a slurry ranging from 1-4% feed solids and produces a final product of 18-22% cake solids. Performance depends on the nature of the solids being processed.

### 工作原理/Working Principle

待处理污水，经污水处理泵提升至气浮机进水仓内，和容器泵的溶气水混合后，在释放区域内形成大量微细气泡，附着在悬浮物颗粒上，使絮状物上浮到水面，由刮渣板刮至排渣口后排出；重质颗粒物经斜板沉淀区，沉降到设备底部的集泥斗，通过管道外排至污泥池中，进行后续处理；澄清后的净化水由设备中心管排出机外。

The removal is achieved by dissolving air in the water or wastewater under pressure and then releasing the air at atmospheric pressure in a flotation tank. The released air forms tiny bubbles which adhere to the suspended matter causing the suspended matter to float to the surface of the water where it may then be removed by a skimming device.

Our DAF unit designs utilize parallel plate packing material (e.g. lamellas) to provide more separation surface and therefore to enhance the separation efficiency of the unit.

## LH-无轴螺旋输送机/ LH Shaftless Screw Conveyor

### 设备简介/Equipment Introduction

无轴螺旋输送机是一种无中心轴，靠螺旋体的旋转来推进并输送泥饼的设备。由驱动电机、支架、输送螺旋、U型槽、衬板、盖板和进料口组成。其具有结构紧凑、节省空间、无料输送流畅、有效防止堵塞和缠绕等特点。而且，整个输送过程在封闭的槽体内进行，物料无外泄，避免二次污染。

LH shaftless screw conveyor transfer materials by rotary of screw, consist of driven motor, support frame, conveying screw, U shape tank, lining plate, cover plate, and feeding section. It has advantage of compact structure, space saving, smooth material handling and no clogging and binding. Plus, the entire transfer process occurs in a closed tank, no materials escape and no secondary pollution.

### 设备特征/Equipment Features

- 采用无轴螺旋工艺，与物料接触面积小，摩擦力低，避免了堵塞缠绕等现象。
- 支撑采用整体压制U型槽结构，强度高，带有可拆卸上盖板，便于观察物料输送情况。
- 驱动部分采用摆线针轮减速机，噪音小，传动平稳。
- 加厚的螺旋片、性能优良的耐磨衬板等优化设计使得整机使用寿命更长。

A bar screen is a mechanical filter used to remove large objects, such as rags and plastics, from wastewater. It normally installed ahead influent pump in wastewater treatment plant .It is part of the primary filtration flow and typically is the first, or preliminary, level of filtration. With the features of compact structure, stable operation, easy handle and automatic cleaning. It is an essential equipment being installed at the influent to wastewater treatment plant and solid-liquid separation for industrial wastewater.

### 工作原理/Working Principle

回转式格栅连续旋转运动，耙齿将污水中固体悬浮物截留，当截留物输送到设备上部时，耙齿改变运动方向，固体杂物自行落下，粘在耙齿上的杂物依靠清污机构的橡胶刷反向运转将其清除干净。过载时，弹簧下压，接近板靠近接近开关，使电机停止运转。

The steel bars goes rotation motion. It captures waste in water while bars going up , waste falling down while bars going down on the other side of machine. Some waste sticking on the bars can be cleaned by rubber brush . At the scenario of overload, a protection spring push down to shut down the motor and stop working.
